

# BRIJESH M

Python Developer | AI & Data Science Engineer | Machine Learning Specialist  
Bangalore, Karnataka | +91 9363141857 | briju898@gmail.com | [LinkedIn](#) | [GitHub](#)

## PROFESSIONAL SUMMARY

Results-driven Python Developer and AI Engineer with 1+ year of industry experience building production-grade machine learning and document intelligence systems. Specialized in developing end-to-end OCR pipelines and integrating large language models (LLMs) and vision-language models (VLMs) to automate complex data extraction workflows. Proficient in backend development with FastAPI, Flask, and Django, and front-end development with React. AWS-certified and IBM-certified in Deep Learning and Reinforcement Learning. Adept at delivering scalable, high-performance AI solutions and collaborating across cross-functional engineering teams in Agile environments.

## TECHNICAL SKILLS

**Programming:** Python, SQL, JavaScript, TypeScript, HTML, CSS  
**AI & Machine Learning:** OCR, LLM Integration, Vision-Language Models (VLMs), TensorFlow, OpenCV, Scikit-learn, Deep Learning, Reinforcement Learning, NLP, Prompt Engineering  
**Frameworks & Tools:** Django, Flask, FastAPI, React, Node.js, MongoDB, PostgreSQL, AWS, Docker, Git, GitHub, Figma, UiPath (RPA), REST APIs, Agile/Scrum

## WORK EXPERIENCE

**Python Developer** | Sirpi Products and Services Private Limited Nov 2025 – Present

- Designed and deployed an end-to-end AI-driven OCR pipeline to ingest, parse, and extract structured data from diverse document formats (PDFs, scanned images, handwritten forms), reducing manual data entry effort by over 70% and accelerating document processing turnaround time.
- Integrated vision-language models (VLMs) and large language models (LLMs) with prompt engineering techniques to enhance semantic understanding of unstructured documents, boosting extraction accuracy by ~40% across varied layouts and document templates.
- Architected scalable FastAPI and Python backend systems to deploy AI inference models into production, delivering low-latency, high-availability document intelligence services capable of processing 1,000+ documents per day.
- Authored comprehensive technical documentation and contributed to system architecture design reviews, improving team onboarding efficiency and ensuring codebase maintainability across multiple AI product modules.
- Researched and benchmarked 10+ OCR libraries and AI models, delivering performance comparison reports that directly informed technology selection and drove a 25% reduction in inference latency.

**Web Developer Intern** | Verzeo INC Sep 2022 – Nov 2022

- Built and maintained 10+ RESTful server-side APIs using Node.js and MongoDB, enabling seamless, secure data exchange between front-end React interfaces and back-end services for a production web application.
- Optimized MongoDB database schemas and implemented efficient CRUD operations and indexing strategies, reducing average query response times by 35% and improving overall system throughput.
- Collaborated across agile sprint cycles to integrate APIs and deliver features on schedule; co-developed a full-stack client-facing web platform as part of a 3-member team.

## TECHNICAL PROJECTS

**Smart Policing System** | Python · TensorFlow · OpenCV · Deep Learning

- Architected a real-time crime monitoring and suspect profiling platform using TensorFlow and OpenCV, achieving 85%+ detection accuracy on live video feeds using custom-trained deep learning models.
- Implemented predictive analytics workflows using Scikit-learn models trained on historical crime datasets, enabling data-driven resource allocation and reducing projected emergency response times by 20%.
- Built a modular data ingestion pipeline to preprocess video streams, ensuring high-quality inputs for downstream AI model inference.

**Inventory & Supply Chain Management** | Python · Flask · MongoDB · Analytics

- Developed a full-stack Flask and React web application for pharmaceutical inventory tracking across 500+ SKUs, featuring real-time stock monitoring, automated low-stock alerts, and interactive analytics dashboards.
- Applied data analytics and visualization to optimize supply chain distribution visibility, reducing inventory shortages by 30% and cutting overstock situations by 20% across product categories.
- Designed a MongoDB-backed architecture to manage product catalogues, supplier records, and transaction histories, supporting scalable data retrieval and business reporting.

## EDUCATION

**B.Tech – Artificial Intelligence and Data Science** 2021 – 2025  
KGISL Institute of Technology | CGPA: 8.31 / 10.0

**HSC / SSLC** 2019 – 2021  
BVM Global School | Aggregate: 90%

## CERTIFICATIONS & AWARDS

- Architecting Solutions on AWS – Amazon Web Services (Feb 2024)
- Deep Learning and Reinforcement Learning – IBM (Oct 2023)
- Shortlisted for Round 2 – Intel OneAPI Hackathon (Jan 2024)
- Shortlisted for Round 3 – National Tomato Grand Challenge (Nov 2023)
